CIRCULAR BIOECONOMY

At Frenvi, we believe the circular bioeconomy is key to building a more sustainable future within the planet's natural limits.

By reducing waste and repurposing resources, we aim to turn everyday challenges into meaningful opportunities for positive change. Together with our community, we are committed to creating practical, sustainable solutions that contribute to a zero-waste future.

PRODUCTS MADE BY UPCYCLING CROP-WASTE

We prioritize the only planet we have, our earth!

Our high-quality products are crafted from sustainable bio-composites material, known as “**AgroDur**”, made with responsibly sourced crop residues like coffee husk, rice husk, rice straws, bamboo husk and more. Plus, they're designed with circularity in mind.

1. BAMBOO

“Nature's wonder material, Bamboo, grows incredibly fast, outpacing all other plants in CO2 absorption. As strong as steel, it offers an eco-friendly alternative with the lowest carbon footprint when used in manufacturing of various products.”

“The aroma of freshly brewed coffee is a surefire way to start the day feeling energized. But it doesn't stop there. Thanks to innovative uses of coffee grounds, you can enjoy your morning cup knowing it's a sustainable choice. It's a win-win for your health and the environment!”

2. COFFEE GROUND

3. RICE HUSK & STRAWS

“Rice, a nutritious and widely consumed grain, is a global staple food. By using products made from rice hulls & straws, we can help farmers avoid crop burning, a harmful practice for our planet.”
